

Report of Engineering and Technical Internship

CLASS : 222

Student ID : 9200214024

Name Adullah Ali Alshakaa

Instructor : 郑祺

Instructor : 赵敏敏

Company : Diandiantong (Hangzhou) Education Technology Co., Ltd.

Location : Room C1409, Building 2, No. 452, 6th Avenue, Baiyang Sub-district, Qiantang District, Hangzhou, Zhejiang Province

Internship Period from 2025/11/18

to 2026/1/14

Table of Contents

1 . Preface

2 . Introduction

3 . Internship Content

- 3.1 Content Preparation and Educational Design
- 3.2 Use of AI and Digital Tools
- 3.3 Presentation Design and Editing
- 3.4 Video Filming and Recording Coordination

4 . Summary

5 . Acknowledgements

6 . Report Reviews

Internship Report in Product Intern

(Note: Name the title as “internship Report” if you have not been out)

1 . Preface

During my two-month internship as a Product Intern, I focused on the following key responsibilities:

- Completed the screening of 5,500 core vocabulary words for the Chinese National College Entrance Examination (Gaokao) English test.
- Developed PPT content covering grammar points, illustrations, layout design, and example sentences.
- Coordinated with foreign teachers for recording sessions and conducted quality checks on the recorded materials.

Liaised with other team members to communicate on the production of final video clips.

2 . **Introduction**

Diandiantong (Hangzhou) Education Technology Co., Ltd. is an education technology company specializing in customized one-on-one tutoring services for senior high school students. The company focuses on improving students' academic performance, by using new technology and modern way of studying particularly in preparation for the Chinese National College Entrance Examination (Gaokao). In addition to tutoring services, the company has developed its own proprietary collection of senior high school teaching auxiliary books, which are widely used in its instructional system.

3 . Internship Content

During my internship at Diandiantong (Hangzhou) Education Technology Co., Ltd., I was mainly involved in the development of English learning products for senior high school students preparing for the Chinese National College Entrance Examination (Gaokao). My work combined educational content design, technology-assisted production, and media coordination, which allowed me to gain practical experience in both education and educational technology.

3.1.1 Content Preparation and Educational Design

One of my primary tasks was to participate in the screening and organization of approximately 5,500 Gaokao core English vocabulary words. This process required careful analysis of exam frequency, difficulty level, and relevance to Gaokao standards. Based on this vocabulary system, I helped design structured lesson content, including thematic vocabulary groups, grammar explanations, and Gaokao-style example sentences.

In addition, I design and planned the lesson presentations (PPTs). This involved selecting appropriate grammar points, designing logical lesson flow, and ensuring clarity and accuracy of explanations. Special attention was paid to aligning the content with Gaokao exam requirements and students' learning needs.

3.1.2 Use of AI and Digital Tools

During the internship, AI-assisted tools were used to improve efficiency in content drafting, sentence generation, and material organization. AI was mainly applied as a support tool to help generate example sentences, check language accuracy, and optimize lesson structure. However, all AI-generated content was reviewed, revised, and refined manually to ensure academic accuracy and suitability for Gaokao-level learners. The AI tool has been use

in all the steps to more efficiently and save time, tool used like ChatGPT , Gemini , and Claude.

Digital tools such as presentation software and collaborative platforms were also used for content editing, layout design, and version control, which enhanced teamwork efficiency most of the Presentation development done in Canva

3.1.3 Presentation Design and Editing

I was involved in the visual design and editing of PPT materials, including layout adjustment, use of icons and illustrations, and formatting of text. The goal was to make the lessons visually clear, engaging, and suitable for online learning environments. Gemini image tool helped my to complete this step .This process helped me understand how educational presentation design can affect students' comprehension and attention.

3.1.4 Video Filming and Recording Coordination

Another important aspect of my internship was coordinating video recording sessions with foreign teachers. I assisted in communication before filming, helped organize lesson materials for recording, and participated in quality checks after filming. This included reviewing pronunciation, clarity, pacing, and alignment between video content and PPT materials.

I also communicated with team members responsible for video editing and final production, ensuring that the recorded lessons met the company's educational and technical standards

4. Summary & Experience

During my internship at Diandiantong (Hangzhou) Education Technology Co., Ltd., I applied my computer science background to support the digital production of educational content for the Gaokao English program. This internship strengthened my ability to combine technical skills with real-world content development and multimedia workflows.

I also developed PPT-based instructional materials, focusing on layout design, modular structure, and visual clarity. This improved my understanding of user interface logic, information hierarchy, and presentation optimization, which are essential for front-end design and user-centered systems.

In addition, I participated in the video production workflow, coordinating recording sessions, managing digital files, and conducting quality checks on recorded materials. I gained practical experience with multimedia editing tools, file formats, version control, and cross-team technical communication. I also explored the use of AI-assisted tools to improve efficiency in content preparation, editing, and organization.

Using AI and modern way of education is very important in my job also the company is about making the most work done in the shortest time possible

Overall, this internship enhanced my technical problem-solving skills, digital literacy, and ability to apply computer science concepts to educational technology. It helped me better understand how software tools, data organization, and multimedia systems are integrated in real industry environments

5. Acknowledgements

I would like to express my sincere gratitude to Diandiantong (Hangzhou) Education Technology Co., Ltd. for providing me with the opportunity to complete my internship and gain valuable practical experience. I am especially thankful to my supervisor and colleagues for their professional guidance, technical support, and patience throughout the internship period.

I would also like to thank the team members who supported me in content development, video production, and quality control processes. Their cooperation and willingness to share knowledge greatly enhanced my learning experience.
